CC --- FUNCTION: Binds to platelet GPIB/IX receptor system, inhibits VMF

CC --- SUBUNIT: Heterodimer of alpha and beta subunits; disulfide-linked.

CC --- SUBUNIT: Heterodimer of alpha and beta subunits; disulfide-linked.

CC --- SUBUNIT: Contains I C-type lectin family domain.

Clemetson K.J.;
                                                                                                                                                                                                                         Peng M., Lu W., Beviglia L., Niewiarowski S., Kirby B.P.,
"Echicetin: a snake venom protein that inhibits binding of von
Wilebrand factor and alboaggregins to platelet glycoprotein Ib.";
Blood 81:2321-2328 [1993].
-!- FUNCTION: Binds to platelet GPIb and inhibits platelet
agglutination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota, Metazoa, Chordata, Craniata, Verrebrata, Euteleostomi,

"Binding of a novel 50-kilodalton alboaggregin from Trimeresurus
albolabris and related viper venom proteins to the platelet membrane glycoprotein Ib-IX- complex. Effect on platelet aggregation and glycoprotein Ib-mediated platelet activation.";

Biochemistry 35:12629-12639(1996).

-I. FUNCTION: Binds to platelet GPIB/IX receptor system, inhibits VWF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      binding and stimulates agglutination.
-!- SUBUNIT: Heterodimer of alpha and beta subunits; disulfide-linked.
-!- SUBCELDUIAR LOCATION: Secreted.
-!- SIMILARITY: Contains 1 C-type lectin family domain.

//tissue type="venon glands, vector; pGEMILET; site_1: Econome glands, vector; pGEMILET; site_1: Econome glands, vector; pGEMILET; site_1: Econome glands were primed with oligo-(dT) and reverse risals and cloning with oligo-(dT) and reverse venome glands were primed with oligo-(dT) and reverse transcribed to cDNA using Superscribe Plasmid System for cDNA synthesis and cloning (LifeTechnologies). The cDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEMILET + vector (Promega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value < e-05)."

The cDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEM112f+ vector (Promega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value < e-05)."

RI; Site 2: Not I; Sug of mRNA from Bothrops insularis
venom glands were primed with oligo-(dT) and reverse
transcribed to cDNA using Superscript Plasmid System for
CDNA Synthesis and Cloning (LifeTechnologies). The cDNAs
were selected by size (350-600 pb and up 600 pb) in
agarose gel electrophoresis, linked to Eco RI adapters and
directionally cloned in pGEMIJEF+ vector (Promega). ESTs
were generated from random clones and grouped in unique
sequences. The putarive identification of each EST of
cluster was obtained through Blast searches (e-value <

/note="Organ: venom glands, vector: pGEMIIZE+; Site_I: Eco RI; Site_2: Not I; Sug of mRNA from Bothrops insularis venom glands were primed with oligo-(dT) and reverse transcribed to CDNA using Superscript Plasmid System for CDNA Synthesis and Cloning (LifeTechnologies). The CDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEMIIZE+ vector (Promega). ESTS were generated from random clones and grouped in unique sequences. The putarive identification of each EST or cluster was obtained through Blast searches (e-value <
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BM401495 Snake Bothrops insularis library IL3 Bothrops insularis cDNA 5, similar to Snake venom C-type lectin, mRNA sequence.

venom glands were primed with oligo-(dT) and reverse
transcribed to cDNA using Superscript Plasmid System for
CDNA Synthesis and Cloning (LifeTechnologies). The cDNAs
were selected by size (350-600 pb and up 600 pb) in
agarose gel electrophoresis, linked to Eco RI adapters and
directionally cloned in pGEM11Zf+ vector (Promega). ESTs
were generated from random clones and grouped in unique
sequences. The putarive identification of each EST or
cluster was obtained through Blast searches (e-value <

transcribed to cDNA using Superscript Plasmid System for CDNA Synthesis and Cloning (LifeTechnologies). The cDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGBM11Zf+ vector (Promega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value <
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BM401417
GH061F Snake Bothrops insularis library IL2 Bothrops insularis cDNA
5. similar to Snake venom C-type lectin, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        149 GATTGTCCCCTGATTGGTCCTCCTATGAAGGAGTTGCTACAGGGTCTTCGAACAAAAG 208

Deinagkistrodon acutus antithrombosis enzyme beta chain.

Antithrombosis, beta chain, fibrin hydrolysis, blood clot, enzyme; platelet aggregation; vaso-occulusive disorder, thromboembolic disorder; myocardial infarction; restenosis, cancer; neurodegenerative disease; angiopathic thrombosis; cerebral thrombosis; thromboanjitis obliterans; ischaemic cerebral vascular disease, unstable angina; acute thrombosis; unstable stenocardia; pulmonary embolism, deep vein thrombosis; oedema; peripheral arterial occulsion; stroke; atherosclerosis; inflammation; thrombosis

Deinagkistrodon acutus.

chromatographic process to separate and purify and the repurifying the thrombase in a fast protein purifying work station. It was found that the Ahylysantinfarctase thrombase II consists of two subunits, Subunit A (ABB83142) and Subunit B (the present sequence).
                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method for purifying Ahylysantinfarctase thrombase II from the snake venom of Chinese Agkistrodon acutus. The method involves using an anionic exchange column
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to halyxin, a novel protein with very strong blood anticoagulation activity. The protein was separated from snake
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Halyxin as blood anticoagulation protein separated from snake venom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Snake; pit viper; venom; halyxin; anticoagulant; thrombogenesis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            composition is useful for preventing and treating vaso-occuluaive and thromboembolic disorders, including myocardial infarction, restenosis, angiopathic thrombosis, cerebral thrombosis, ischaemic cerebral vascular diseases, unstable angina, acute thrombosis, unstable stenocardia, thrombosangiitis obliterans, pulmonary embolism, deep vein thrombosis, peripheral arterial occulsion, stroke. It is also useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   peripheral arterial occulsion, stroke. It is also useful for treating atherosclerosis, oedema and inflammation, cancer and neurodegenerative diseases. The present sequence represents the amino acid sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a new Deinagkistrodon actus anti-thrombosis enzyme, where the enzyme hydrolyses fibrin, dissolves blood clots and prevents platelet aggregation. The anti-thrombosis enzyme was administered to rabbits intravenously. Thrombosis was determined before and after the administration at 0.5, 1.0, 2.0 and 3.0 hours by the Chandler method. The enzyme showed anti-thrombosis activity at 0.5 hour following administration at 0.005 micro/kg and this activity was increased significantly at 1.0 hour and at 0.01 micro /kg. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The protein was separated from snake venom of Agkistrodon halys brevicaudus (a Korean pit viper) and can be used in the treatment of thrombogenesis. The present sequence is the B chain of halyxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
venom of Agkistrodon halys brevicaudus (a Korean pit viper) and can
be used in the treatment of thrombogenesis. The present sequence is
a peptide derived from the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Halyxin as blood anticoagulation protein separated from snake venom

                                                                                                                                                                                                                                                                                                                                                                                    AAR71980 is a snake venom derived antithrombotic peptide, prepared by cleaving the interpeptide but retaining the intrapeptide disulphide bonds of the original snake venom oligopeptide. The peptide has the advantage of avoiding significant thrombocytopenia when administered at the minimum dose, for in vivo inhibition of platelet von Willebrand factor binding.

AL-A may be obtd. from snake venom. It has a mol. wt. of about 45 kDa. AL-A contains two types of polypeptide chains, with mol. wt. of about 18 kDa and about 15 kDa, respectively. Each of these two types of chains is actually composed of two subtypes. Thus, AL-A comprises four non-identical polypeptide chains. A possible variation of AAR38224 has been found, characterised by Asp at posn. three in lieu
      The PAA was purified from a solution of snake venom. Analysis of the peak inhibitory fractions by SDS-PAGE revealed 2 major proteins migrating with a mol. wt. 23-28 kD. Both were able to inhibit botrocetin and ristocetin induced platelet agglutination. They were alled CHH-A and CHH-B. The earlier aluting subunit (CHH-B-beta) and later eluting subunit (CHH-B-alpha) were individually submitted to V-terminal sequence analysis. The complete amino acid sequence (Ordated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                   The PAA was purified from a solution of snake venom. Analysis of the peak inhibitory fractions by SDS-PAGE revealed 2 major proteins migrating with a mol. wt. 23-28 kD. Both were able to inhibit, botroocetin and ristocetin induced platelet agglutination. They were called CHH-A and CHH-B. The earlier eluting subunit (CHH-B-beta) and later eluting subunit (CHH-B-beta) to N. terminal sequence analysis. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAR72232 is a Vipera palestinae venom derived N-terminal fragment, the full peptide is given in AAR72236. A peptide compsn. comprising AAR72236 and AAR72235 is claimed, it inhibits the binding of platelets to von Willebrand factors and can therefore be used as an anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                Vipera palestinae, venom, N-terminal fragment, antithrombotic agent, platelet binding, von Willebrand factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Vipera palestinae; venom; N-terminal fragment; antithrombotic agent;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptide derived from Vipera palestinae venom - inhibits binding of platelets to von Willebrand factor, useful as antithrombotic agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

AAR72231 is a Vipera palestinae venom derived N-terminal fragment, the full peptide is given in AAR72235. A peptide compsn. comprising AAR72235 and AAR72236 is claimed, it inhibits the binding of platelets to von Willebrand factors and can therefore be used as an anti-
                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Vipera palestinae, venom; N-terminal fragment; antithrombotic agent; platelet binding; von Willebrand factor.
                                                                                                                                                                                                                          Peptide derived from Vipera palestinae venom - inhibits binding of platelets to von Willebrand factor, useful as antithrombotic
                                                                                                                                                                                                                                                                                                                                                                                                                           ;

                                                                                                                                AAR72234 is a Vipera palestinae venom derived N-terminal fragment, the full peptide is given in AAR72236. A peptide compsn. comprising AAR72236 and AAR72235 is claimed, it inhibits the binding of platelets to von Willebrand factors and can therefore be used as an antithrombotic agent.
                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The PAA was purified from a solution of snake venom. The earlier eluting subunit, PP-beta was subjected to Edman degradation for 50 cyles to obtain the sequence in AAR23889. The later eluting sequence - the PP-alpha chain was determined for 31 cycles to give the SQ in AAR23890.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR72233 is a Vipera palestinae venom derived N-terminal fragment, the full peptide is given in AAR72235. A peptide compsn. comprising AAR72235 and AAR72236 is claimed, it inhibits the binding of platelets to von Willebrand factors and can therefore be used as an antititrombotic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

AAR72235 is a Vipera palestinae venom derived peptide. A peptide compsn. comprising AAR72235 and AAR72236 is claimed, it inhibits the binding of platelets to von Willebrand factors and can therefore be used as an anti-thrombotic agent. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                Peptide derived from Vipera palestinae venom - inhibits binding of platelets to von Willebrand factor, useful as antithrombotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 4,
